

# MODEL 211 AUTOMATIC GATE OPENER PANEL

for Emergency Vehicles using 3M Opticom(tm)

## How the 3M Opticom™ System Works

A coded high energy light from the emergency vehicle Emitter saturates the gate area to activate the Optical Detector which tells the Discriminator Module to open the gate. The gate closes automatically after the emergency vehicle passes.

Works with any style security gate.

Works with all models of 3M Opticom(tm) discriminator modules.

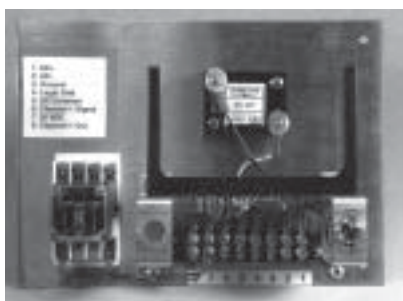

Allows emergency vehicles equipped with Optical Emitters to automatically open security gates at an apartment or business complex.

Gates automatically close after emergency vehicle passes.

Easily installs in gate opening housings.

On/off switch and relay (optional time delay) isolation between gate and discriminator module.

Separate enclosures available.
